Quantification and reporting methodology

The group has followed the 2019 HM Government Environmental Reporting Guidelines. The group has also used the GHG Reporting Protocol – Corporate Standard and have used the 2022 UK Government's Conversion Factors for Company Reporting

Intensity measurement

The chosen intensity measurement ratio is total gross emissions in metric tonnes CO2e per employee, the recommended ratio for the sector, to accurately measure how the emissions grow in line with the employee numbers.

Measures taken to improve energy efficiency

We have installed a total of 148 solar panels on the roof of its headquarters. It is estimated that the solar panels are expected to save over 350 tonnes of CO2 in 20 years. Due to the COVID-19 pandemic, homeworking has become far more prevalent than in previous years. This has had a direct impact on the Total gross CO2e per employee as less office space was in use.
